

Ethox International Inc, (Buffalo, NY) announced the release of their newly re-designed Infu-Surg® pressure infuser bags. Ethox International's Infu-Surg® family of pressure infuser bags have been a constant in IV Infusion treatment for over 20 years. The Infu-Surg® pressure bags from Ethox International are safe, high-quality and reliable products for Intravenous & arterial Infusion. The Infu-Surg® pressure bags are designed for single patient use potentially preventing and controlling cross contamination and hospital acquired infections.

The re-design affects the labeling of the pressure bags; a new color, updated logo and silk-screen printing are a few of the updates. The new 500ML, 1000ML and 3000ML Infu-Surg® models maintain the same level of performance and functionality that medical professionals have relied on for decades; only the labeling has been improved.

The new look and re-design are part of Ethox's on going strategic branding initiative, which has included a recently launched re-designed website. Ethox International manufactures disposable medical devices used in Operating Room, Anesthesia, Emergency and Infection Control environments. Ethox's product line includes disposable pressure infusers, Patient Positioners, disposable BP cuffs, gastric lavage kits, wound irrigation, instrument holders and weighted feeding tubes. All products are USA FDA registered, ISO Certified and CE marked.
